

PowerChute® Network Shutdown for VMware

Reliable network-based shutdown of multiple servers.

PowerChute® Network Shutdown prevents possible data corruption by performing graceful, unattended operating system shutdown in the event of an extended power outage.

Real-time event notification minimizes response times to critical physical infrastructure situations. Enables IT Administrators to reduce mean time to repair, improve efficiency, and maximize uptime. Receive alerts via mobile phones (SMS), Web applications (HTTP Post), and e-mail.

Secured web access via HTTPS as default, ensures that communication between the device and the client interfaces cannot be intercepted.

APC PowerChute® Network Shutdown software works in conjunction with the APC UPS Network Management Card to provide graceful, unattended shutdown of multiple computer systems over a network. Its scalable architecture can support a virtually unlimited number of client systems.
